**Strikemaster mag 2000 ice auger**

I'm looking into oglers for the first time and wonder if someone used the Strikemaster Magnum 2000 with a 2 hp engine and 8 blade. Good / bad, pros / cons, reliable, etc... Mount Gander has them on sale. I'm not in drill a ton of holes, basically going out with my dad and family and punching 10-15 holes once a week during the ice season. thanks, Bob, that schneer would be perfect for you then. I had an older magnum and absolutely loved this thing and I didn't hear anything wrong about the striker. This particular schneer will make you just fine. How I owned several of this exact same model. It's light weight, cuts pretty fast and starts well. Use premium gas and always keep a lid when not in use. Good luck fishing, I had Mag 2000 with '98 and it's still going... starts 3-4 pulls every time. The only thing I did was change the blades, plug and fuel pump 2 years ago... Run the prize in it and very good to go. Don't assume I'll ever get rid of it... I have one also ... works for me I bought one a few years ago from a guy on craigslist who told me it wouldn't work. I bargained with it for up to \$75 since it didn't work. Turns out he never washed the fuel line before she spent a year in the garage. I ran warm water through it when I got home, filled it back and it's started right since then. These things are big and easy to carry. I travel on business I also bought one of the old models in a pawn shop for 75.00. I put a carb kit in it and drain and finish the gas at the end of the season and have never had a problem since. I like the durability of chipper blades over laser blades. Usually starts at 3 pulls 2 full choke, 1 1/2 choke, and I run. I like atvcesters more through metal handles. Had a new mag 2000 and broke their cheap ass plastic twice in the cold from being dumped. Only my .02 cents I had one with metal handles and I would buy another for the right price. The only thing I did was wrap them in hockey tape because the thing was so crumpling that it would tear the handles out of your hands if you weren't careful. There were a few bruised knees from that. Either way about it, although dropping it would have sned something up. I wish I'd gone with chipper blades, against a laser. You really have to watch where you drill with lazer blades. Windy sand on river ice can make them fast. I played one last year, it's great fakes for me. Lots of speed and light weight. Strikemaster mag 2000 is a big schneel! any strikemaster! but I agree for what you need for mag 2000 perfectly I had the same Strikemaster since the late 90s and still works well. Not as fast as drilling a hole as the new ones I see, but works for me. Because she's older, I try to start it every couple of months in the offseason, so I know she's ready to go for the winter. Get It Wed, 3 February - Wed, April 7th from Mora, Schneka partStrikemaster Mag 2000 ice auger part. Bean 3009 #2. I really really do That!
